Commission Order

Per General CCA Order 14-M-0224, we are to report annually "the number of customers served, number of customers canceling during the year, commodity prices paid and value-added services, if any, and administrative costs collected." Below we have assembled this information for 2021 from January through the end of the year.

Program Retention History

Overall Program Gain/Attrition (2021)

Utility Territory	Start of Year Count	End of Year Count	Net Gain/Attrition in 2021	
			Accounts	Percentage
Con Ed*	94,628	101,302	+6,674	+7.1%
NYSEG**	7,530	6,829	-701	-9.31%
Westchester Power Total	102,158	108,131	5,973	5.85%

*The Start of Year Count for Con Ed excludes the count for the Village of Tuckahoe, which launched as a participating municipality in April 2021 and not at the start of the year

**The End of Year Count for NYSEG was the month of November, as the last month of full participation in NYSEG before our pause in services in that territory, which began in December of 2021

Value-added Services: Installation of DER, Clean Energy Services

Community Solar

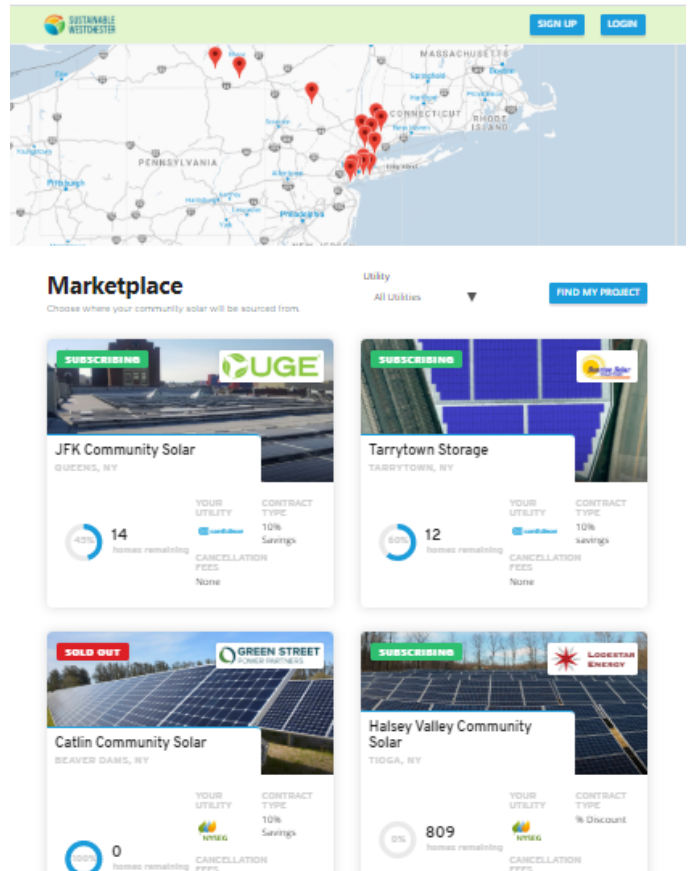

Since the launch of Sustainable Westchester's Community Solar program in 2018, over 2,200+ residents and local organizations, and 11 municipalities have joined as subscribers in 30+ community solar projects. In 2021, Sustainable Westchester continued to build on its experience in coordinating and facilitating dozens of local Community Solar campaigns to broaden access and awareness of the benefits of Community Solar, namely a guaranteed savings on electric bills and support of local renewable energy. Such campaigns have also secured nearly \$100,000 in grant funding for clean energy initiatives in local municipalities through NYSEERDA's Clean Energy Communities (CEC) program.

Sustainable Westchester's approach to Community Solar is a natural extension of the community campaign model begun in the Solarize Westchester rooftop solar program (2015-2018) and continued throughout the Community Solar program. The Community Solar outreach and public education efforts also benefit from the skills and emphasis on customer service that is fundamental to five years of Westchester Power operations. This ensures that Community Solar subscribers are well-informed about how the program works and how they earn savings through the program.

With utility consolidated billing now scheduled for final utility testing and full implementation in 2022, Sustainable Westchester will be planning for this change and is developing its plan for incorporating the community solar credit distribution on an opt-out basis through Westchester Power's Solar Credit offering.

Solar + Storage

Battery storage of renewable energy plays a critical role in maximizing renewable energy utilization. Sustainable Westchester has worked to create a model of Sunshine-to-EV (electric vehicle) which will combine a Solar PV system (a solar installation), a battery and a high speed EV charging at its headquarters in Mount Kisco. The model has a community solar component for better economics and a community

**SUSTAINABLE
WESTCHESTER**

Power**
OUR COMMUNITY.
OUR CHOICE.

benefit in the form of savings for subscribers to the project through the Community Solar program.

The goal is for this project to serve as a very visible educational tool, in addition to the concrete financial and environmental benefits it offers.

Demand Response

In 2021, Sustainable Westchester continued its demand response program, GridRewards, for residential accounts in ConEd territory, a first of its kind in the Northeast. This program uses an aggregation technology platform that takes advantage of the Advanced Metering Infrastructure (AMI) and allows individuals to access utility demand response programs through a smartphone application. During the 2021 season, there were close to 2,000 participants. On average, participants were paid \$68 for their usage reductions during peak periods, with the most responsive customers earning up to \$700. These earnings were acquired over 5 demand response events, lasting between two and four hours long. In addition to financial savings for community members, Sustainable Westchester is pleased to offer important services to the grid through our aggregation, minimizing the need for peaker plants and easing grid constraints. In 2022 the program is adding a Refer-a-Friend program.

Clean Transportation

Sustainable Westchester continued to promote the transition to clean electrified transportation in 2021, by helping consumers access information, discounts, and incentives on both electric vehicles and charging stations. Sustainable Westchester partnered with a charging station company in order to greatly accelerate the deployment of charging station infrastructure in Westchester County. Sustainable Westchester support to member municipalities has resulted in the installation of dozens of charging stations across the County.

Sustainable Westchester also won a Phase I of the New York Clean Transportation Prize competition for a Bee Line On Demand proposal for a \$7 million prize that it will submit in June 2022. Sustainable Westchester is partnering with Via, the County, the City of Peekskill and Tris-State Transportation on this proposal.

Landscaping

Passenger car emissions will continue to decrease due to industry's improved emissions controls in cars, increasing adoption of electric cars and as well as growing share of renewables in the energy portfolio. According to reports published by California's Air Resource Board, by 2031, emissions from small engines such as those primarily used for lawn, garden, and other outdoor power equipment, will be more than twice those from passenger cars.

Sustainable Westchester promotes the benefits of converting to electric landscaping equipment as part of the "electrify everything" imperative, and is working to establish a model to promote low emissions, low impact and sustainable landscaping practices. Sustainable Westchester will continue to identify opportunities to pilot and scale clean energy initiatives in transportation and landscaping.

Residential Home Energy Efficiency & Clean Heating and Cooling

Sustainable Westchester's residential energy efficiency and clean heating and cooling program, EnergySmart Homes Westchester promotes weatherization, electrification via air source and ground source heat pumps and heat pump hot water heaters, with funding from a NYSEERDA grant. Through the EnergySmart Homes Westchester Program (ESH), Sustainable Westchester assists Westchester County residents and local communities in offering high quality, competitively priced Clean Heating and Cooling (CH&C) installations from vetted contractors, and energy efficiency solutions to homeowners through a series of local community campaigns. They also provide access to complementary clean energy solutions including GridRewards.

Heating and cooling energy expenditures are responsible for one third of the carbon emissions in Westchester and New York State. The options offered to homeowners in EnergySmart Homes Westchester, provide a proven way for individuals and communities as a whole to improve local sustainability, save on heating and cooling costs, gain positive returns on investment with incentive programs and tax credits, and create a beneficial impact to air quality, family and public health, and the environment. The program offers resources such as a robust website featuring local testimonials, case studies, webinar recordings, video interviews, community volunteers profiles and more. Homeowners are equipped with a list of vetted contractors, informational sheets explaining utility, state and federal rebate and incentive programs, in-depth presentations recordings, technology overview sheets and customized information based on their style of home.

In 2021, the ESH program operated community campaigns in the Town and Village of Pelham, Town and Village of Ossining, Village of Briarcliff and the Rivertown Villages of Tarrytown, Sleepy Hollow, Irvington, with support to residents across Westchester County. Throughout the course of the year issued an RFP to partner contractors, onboarded four new contractors to the ESH partner installer list, trained over 20 community volunteers, produced 10 homeowner interview videos, hosted 15+ webinars engaging 900 participants and generated over 1,500 homeowner leads. The team provides both email and phone support to interested homeowners, tables at local events and straggailly advertises throughout the community with the support of a network of volunteer partners.

Clean Energy Communities Support

Sustainable Westchester has continued, with the support of the Regional Clean Energy Communities Coordinator, to provide guidance and documentation for municipalities seeking to submit to the program. 23 Westchester Municipalities have obtained credit for Community Choice Aggregation under the program. With 48 community campaigns in progress and a total of 24 community campaigns having been run and awarded for demand response, clean heating and cooling and community solar - helping to connect electrification and demand management to the transition to clean energy that Community Choice Aggregation underpins. Sustainable Westchester is proud to have assisted so many municipalities in their Clean Energy Community campaigns, Westchester is home to the top three communities on the Clean Energy Communities statewide leaderboard.

Plans for Renewal

March of 2022 saw both the relaunch of the NYSEG aggregation after a 3-month pause, and the launch of Yonkers. Those two contracts end on November 30, 2023, so there will be no renewal activity in 2022. The Con Edison contract ends June 30, 2022. Sustainable Westchester is working with participating municipalities to negotiate an extension to that contract with the aim of postponing the auction to a potentially less uncertain period, and also to allow time to organize an enhanced auction process.
