

2019 Con Ed Contract Notification Letters Mailed

November 15, 2018 by

It feels like we launched the Westchester Power just a short time ago, but in fact the contract for our Con Ed territory municipalities ends December 31. We have completed the solicitation for the new contract to begin January 1 ([see press release](#)) and notification letters have gone out as of yesterday (11/14/2018). The mailing will go to current customers, as well as residents and small businesses that are eligible. Accounts which are already signed up with other private suppliers will not receive the notice. If you see these, please read – they are not private solicitations!

Welcome to Westchester Power!

The Village of Ardsley has joined with 23 other municipalities in a community electricity program known as Westchester Power. The Westchester Power program is run by Sustainable Westchester, a local non-profit based out of Mount Kisco, which aims to bring green power to Westchester residents at an affordable price.

By buying power as a group, we have been able to provide more than 90,000 Westchester residents and small businesses with low-cost, fixed rates for electricity supply since 2016. So far, the Westchester Power program has saved Westchester residents over 13.5 million dollars and offset more than 360,000 metric tons of carbon dioxide.

For translation services please call our office at (914) 242-4725.

Supply Options

There are two supply options under our program: renewable and standard.

- **100% Renewable Option:** Your total electricity supply is matched by New York State certified

Great news!

The City of White Plains is continuing its participation in the Westchester Power program!

Westchester Power, the community energy program run by local non-profit Sustainable Westchester, has successfully provided more than 90,000 Westchester residents and small businesses with low-cost, fixed rates for electricity supply since 2016. So far, the Westchester Power program has saved Westchester residents over 13.5 million dollars and offset more than 360,000 metric tons of carbon dioxide.

Beginning in 2019, there will be new rates and supply options. Here's the overview of what it means for you:

For translation services please call our office at (914) 242-4725.

- Commercial customers will see their rates cut by approximately 20%!
- Residents in the renewable supply have also just had their rate lowered!
- Standard supply residential rates are still lower than the 2015 Con Edison benchmarks, and
