

# NY State mandated 2017 environmental disclosure reports

July 12, 2019 by

The NY State mandated 2017 environmental disclosure reports will be arriving in mailboxes over the next week or so. Yes, 2017 – that’s how long it takes for this information to make it through the various agencies and processes and be finally released. That means that if you only enrolled the program in 2018 you will not be receiving this mailing.

And, as we have explained in earlier mailings of this sort, the State report is for the Supplier’s (Constellation’s) full NY supply portfolio, not just your individual or municipal supply selection, so it will not look correct for residents in the renewable energy supply option. Our program supply for that period was certified under the Green-e system so we have included the Green-e renewable energy certificate information in the mailing for reference. The mailing for renewable customers will look like this (click to view full letter):

<DATE>  
<FIRST NAME> <LAST NAME>  
<TITLE>  
<COMPANY>  
<ADDRESS>  
<CITY, STATE ZIP>

Dear Westchester Power Customer,

RE: Constellation NewEnergy, Inc. New York Environmental Disclosure for 2018

You are receiving this letter because you received electricity supply from Constellation through the Westchester Power Community Aggregation program in 2018. These reports are purely informational and do not indicate a change to your current contract or require any action.

Enclosed are:

1. The New York State Environmental Disclosure Report  
This report includes Constellation NewEnergy, Inc.'s entire customer base in the State of New York, and so is not specifically representative of Westchester Power or your individual supply. We are mandated by New York State to send this to all of our customers.
2. The Westchester Power Green-e National Wind historical product content label for calendar year 2018  
This report is specific to the renewable energy certificates associated with your supply under the Westchester Power program during the indicated period.

The scope of these two reports is completely different, and we therefore often get inquiries from customers who wonder why the NYS Environmental Disclosure Report does not seem to match their renewable energy purchase under the Westchester Power program. Please be assured that the Green-e report gives an accurate accounting for your renewable energy purchase.

If you have any questions, please contact Sustainable Westchester at (914) 242-4725 or [info@westchesterpower.org](mailto:info@westchesterpower.org)

Thank you,

Constellation and Sustainable Westchester

If you are in the program standard supply, you will receive only the State report, and it will look like this (click to view full letter):

<DATE>  
<FIRST NAME> <LAST NAME>  
<TITLE>  
<COMPANY>  
<ADDRESS>  
<CITY, STATE, ZIP>

Dear Westchester Power Customer,

RE: Constellation NewEnergy, Inc. New York Environmental Disclosure for 2018

You are receiving this letter because you received electricity supply from Constellation through the Westchester Power Community Aggregation program in 2018. The referenced report is purely informational and does not indicate a change to your current contract or require any action.

Enclosed is the Environmental Disclosure report for electricity supplied by Constellation NewEnergy, Inc. in the State of New York in 2018. This report applies to Constellation's entire customer base in New York and is not specific to the Westchester Power program.

If you have any questions about this or other aspects of the program, please contact Sustainable Westchester at (914) 242-4725 or [info@westchesterpower.org](mailto:info@westchesterpower.org)

Thank you.

The State tracks renewable energy through NYGATS (NY General Asset Tracking System). They are working now with our suppliers on updated processes to register our renewable energy purchases so that they reflect correctly on the environmental disclosure reports. They are also looking to speed up the process a bit, so that starting in late 2020 (for 2019 purchases) there will no longer be two reports with different content. The 2018 reports will still show this disconnect between our renewable energy purchase and the State report and we suspect these will issue in early 2020. This is all a bit confusing and a little bureaucratic for sure and we look forward to the update and simplification of the reporting system. The important thing is that cumulative greenhouse gas mitigation through program purchases by residents and small businesses in the 27 participating municipalities have reached over 500,000 Tons of CO2 equivalent, and we continue to build critical environmental programming on top of this amazing platform.

A Program of [Sustainable Westchester](#) and participating municipalities
